

## Accredited engineering degree programs in Canada

**Figure 1.2** Names of accredited Canadian engineering programs in 2015. Of the 275 program names published in reference [4], those occurring more than once are listed on the left, with the bottom row showing that 52 names occur only once. Mechanical engineering, found at 36 institutions, has the largest count. There are 74 distinct names but the cumulative percent line shows that the most common three make up more than a third of the total and the most common five more than 50%.
