

*Fraser Kent, P.Eng.
PEO
PhD in Environmental Engineering
University of Guelph*

MANULIFE FINANCIAL SCHOLARSHIP

Concerned that water scarcity is a major problem facing the world, Fraser Kent, P.Eng., feels that most of the water in our communities is not used for drinking but for other purposes such as agricultural and landscape irrigation, and urban and industrial applications. He affirms that treating wastewater for its reuse is a good strategy.

Undertaking a PhD in Environmental Engineering and specializing in Water Reclamation at the University of Guelph, a city that often faces water shortages, Fraser will investigate methods for improving the efficiency of water recovery technologies. Through conducting fundamental process research, Fraser hopes to bring out the value of wastewater as a resource for our water needs.
